

AGENTIC AI

Agentic AI Workshop

Build AI agents and ship a working multi-step prototype on n8n + APIs in one week.

START DATE	DURATION	TOTAL HOURS	PER SEAT	TIMING
14 Jun 2026	1 week (5 days)	30 hrs	KWD 450 / seat	8:00 AM – 2:00 PM

[OVERVIEW]

Five days from prompting LLMs to shipping a multi-step AI agent. Each engineer walks out with a working n8n + APIs prototype built on a real workflow from your business, not demo-ware. Covers agent design patterns, tool use, RAG, and safety guardrails.

[WHAT YOU'LL WALK OUT WITH]

- Each attendee ships a working multi-step AI agent prototype on n8n + APIs
- Apply core agent design patterns (planner / executor / supervisor)
- Set up retrieval-augmented generation against your own knowledge base
- Connect agents safely to internal APIs and external services
- Know when an agent is the right shape, and when prompts and a script are enough

[COHORT DATES]

June 14–18, 2026	Next cohort
August 9–13, 2026	Open
October 11–15, 2026	Open

Agentic AI Workshop...

DAY 1

6 hrs

From LLMs to Agents

LLM fundamentals refresh, what makes AI agentic, agent design patterns (planner / executor / supervisor), n8n setup, first single-agent flow.

DAY 2

6 hrs

Tool Use & Integrations

API basics for non-engineers, connecting agents to APIs in n8n, structured outputs (JSON schemas), memory and context, multi-tool agent build.

DAY 3

6 hrs

Multi-Step Planning & RAG

Multi-step reasoning patterns, RAG fundamentals, vector databases and embeddings, build a Q&A agent on internal docs.

DAY 4

6 hrs

Production Patterns

Error handling and guardrails, cost and rate-limit management, observability and logging, API key security, production-grade agent build.

DAY 5

6 hrs

Capstone

Use-case scoping, capstone build, presentations, and a deployment plan for a real internal workflow.

[WHO THIS IS FOR]

Engineers, technical PMs, R&D leads, and AI champions building first agentic prototypes. Prerequisites: at least one programming language (Python preferred), REST API basics, and prior LLM prompting exposure. Maximum cohort size: 35.
