

CYBERSECURITY

Cybersecurity Bootcamp

Ten weeks producing real cyber operators, Red Team, Blue Team, incident response, with AI-augmented workflows throughout.

START DATE	DURATION	TOTAL HOURS	PER SEAT	TIMING
17 May 2026	10 weeks	200 hrs	KWD 2,690 incl tax	60 weekdays to Thursdays · 5:00–8:45 PM · 5 days

[OVERVIEW]

Ten weeks of evenings producing real cyber operators. Phase 1 covers Cybersecurity Foundations to a Mini CTF gate; Phase 2 splits Offensive (5 weeks) and Defensive (3 weeks), ending in a hybrid Red/Blue Team simulation with a professional pentest report and incident-response report as deliverables.

[WHAT YOU'LL WALK OUT WITH]

- Conduct structured penetration tests across web, OS, Active Directory, and hybrid cloud
- Operate within SOC workflows: triage, log analysis, SIEM detection (Splunk, Wazuh, ELK)
- Manage the full incident lifecycle: disk, memory, and network forensics with structured IR reporting
- Apply MITRE ATT&CK and OSINT for hypothesis-driven threat hunting
- Use AI to accelerate reconnaissance, log investigation, threat hunting, and reporting

[COHORT DATES]

May 17 – Jul 23, 2026	Next cohort
Jun 21 – Aug 27, 2026	Open
Aug 16 – Oct 22, 2026	Open
Oct 11 – Dec 17, 2026	Open

Cybersecurity Bootcamp...

MODULE 1: FOUNDATIONS & SYSTEMS (WEEKS 1-2)

40 hrs

Module 1: Foundations & Systems (Weeks 1-2)

Anatomy of a cyber attack, Cyber Kill Chain, IR lifecycle, Windows/Linux admin, networking, Wireshark, Burp Suite, web vulnerabilities (SQLi, XSS, IDOR), cryptography. Mini CTF gate to advance.

MODULE 2: OFFENSIVE SECURITY (WEEKS 3-7)

100 hrs

Module 2: Offensive Security (Weeks 3-7)

Red Team methodology, recon (OSINT, Nmap), manual web exploitation, privilege escalation, AD attack chains, hybrid cloud offensive ops. Culminates in a hybrid enterprise Red Team simulation + professional pentest report.

MODULE 3: DEFENSIVE SECURITY & BLUE TEAM (WEEKS 8-10)

60 hrs

Module 3: Defensive Security & Blue Team (Weeks 8-10)

SOC architecture, log/SIEM analysis, phishing investigation, detection engineering (Sigma), digital forensics, threat hunting, AD abuse detection, hybrid cloud IR. Culminates in a Blue Team simulation + incident response report.

[WHO THIS IS FOR]

For technical professionals, engineers, IT operators, security analysts, who want to operate at a professional Red/Blue Team level. Programming exposure helps; the Foundations module covers the baseline. Phase 2 enrollment requires passing Phase 1's Mini CTF.
